

I claim:

1. A paint brush cover comprising:

- a. a substantially quadrilaterally shaped wrap portion being made of a durable, flexible material, said wrap portion including right, middle and left sections, all of said sections having an internal surface and an external surface, and all said sections being capable of being able to be folded over each other, said middle section having a first edge and a second edge;
- b. a flap portion being made of said durable, flexible material having a first edge, a flexible interface region, an internal surface and an external surface, said flap portion capable of being placed in a folded formation such that it covers at least a portion of said wrap portion, said flexible interface region of said flap portion being integrally attached to said first edge of said middle section; and
- c. means for securing said flap portion in place when in said folded formation, said means for securing contemporaneously securing a paint brush within said wrap portion.

2. The paint brush cover of claim 1, wherein said interface region has a varying width to accommodate paint brushes of different sizes.

3. The paint brush cover of claim 1, wherein said means for securing said flap portion to said wrap portion and securing said paint brush within said wrap portion is comprised of a coordinated fastening system having a hook component and a loop component, one of said hook and loop components being attached to one of said

5 external surface of the top region of said flap portion or said external surface of the
bottom region of said middle section, the other of said hook and loop components
being attached to the other of said regions.

4. The paint brush cover of claim 1, wherein said durable material is canvas.

5. The paint brush cover of claim 1, further comprising a lining attached to said
internal surface of said durable, flexible material.
